

**FIGURE 7.2.** Schematic of the behavior of bias and variance. The model space is the set of all possible predictions from the model, with the “closest fit” labeled with a black dot. The model bias from the truth is shown, along with the variance, indicated by the large yellow circle centered at the black dot labeled “closest fit in population.” A shrunken or regularized fit is also shown, having additional estimation bias, but smaller prediction error due to its decreased variance.
